CIRCULAR

In supersession to the above referred circular, the updated approved Syllabus of **Bachelor of Science in Industrial Chemistry** Programme with following changes is enclosed.

- Added Skill Enhancement Course, **ICD-141 'Analysis of food products'**.

Principals of Affiliated Colleges offering the **Bachelor of Science in Industrial Chemistry** Programme are requested to take note of the above and bring the contents of this Circular to the notice of all concerned.

(Ashwin Lawande)

Assistant Registrar – Academic-PG

To,

1. The Principals of Affiliated Colleges offering the Bachelor of Science in Industrial Chemistry Programme.

Copy to:

1. The Director, Directorate of Higher Education, Govt. of Goa
2. The Dean, School of Chemical Sciences, Goa University.
3. The Vice-Deans, School of Chemical Sciences, Goa University.
4. The Chairperson, BoS in Chemistry (UG).
5. The Controller of Examinations, Goa University.
6. The Assistant Registrar, UG Examinations, Goa University.
7. Directorate of Internal Quality Assurance, Goa University for uploading the Syllabus on the University website.

Programme Structure for Semester I and II Under Graduate Programme- Industrial Chemistry Double Major

Semester	Major -Core	Minor	MC	AEC	SEC	I	D	VAC	Total Credits	Exit
I	CHC-100 Fundamentals of Chemistry (4) ICD-100 Fundamentals of Industrial Chemistry (4)	CHC-111 Basic Concepts in Chemistry (4) ICD-111 General Industrial Chemistry (4)	CHC-131 Introduction to Chemistry (3)		CHC-141 (SEC-1) Water and Soil Analysis (1T+2P)					
II					OR CHC-142 (SEC-2) Skills in Qualitative Organic Analysis (1T+2P) OR CHC-143 (SEC-3) Chemistry of Cosmetics and Perfumes (1T+2P) OR ICD-141 (SEC-4) Analysis of food products (1T+2P)					*EXT-1 XXX-161 (Course Title) (4)

* List of Exit Courses along with the syllabus will be provided separately.

Note: Programme structure for Sem III to VIII shall be provided separately.

Effective from AY: 2023-24

Pre-requisites	Nil	
Course Objectives:	<ul style="list-style-type: none"> • To study the postulates of kinetic theory of gases and understand the deviations of real gases from ideal behaviour. • To study the surface tension and viscosity of liquids. • To introduce the concepts of atomic structure. • To understand the basic concepts in organic chemistry. • To understand the preparation and reactivity of alkanes, alkenes and alkynes. 	
Content		No of hours
	Fundamentals of Physical Chemistry Gaseous state Postulates of Kinetic Theory of gases and deviation from ideal behaviour, Vander Waal's equation of state. Critical phenomenon; PV isotherms of real gases, continuity of states, the isotherms of Vander Waal's equation relation between critical constants and Vander Waal's constants. Law of corresponding states, reduced equation of state. Molecular velocities: root mean square, average and most probable velocities, Qualitative discussion of Maxwell's distribution of molecular velocities, collision number, mean free path and collision diameter. Numerical problems.	10
	Liquid State Surface Tension, Units of Surface Tension, Determination of Surface Tension by Capillary Rise Method and stalagmometer method. Viscosity, Units of Viscosity, Poiseuille equation, Measurement of Viscosity by Ostwald Method, Effect of Temperature on Viscosity of a Liquid. Numerical problems.	05
	Fundamentals of Inorganic Chemistry Atomic Structure: Review of: Bohr's theory and its limitations, dual behaviour of matter and radiation, de Broglie's relation, Heisenberg Uncertainty principle. Hydrogen atom spectra. Need of a new approach to atomic structure. Introduction to Schrodinger equation (equation not to be derived) and wave function. Radial and angular parts of the hydrogenic wave functions (atomic orbitals) and their variations for 1s, 2s, 2p, 3s, 3p and 3d orbitals (Only graphical representation). Radial and angular nodes and their significance. Radial distribution functions and the concept of the most probable distance with special reference to 1s and 2s atomic orbitals. Quantum numbers and their significance, Discovery of spin, spin quantum number (s) and magnetic spin quantum number (ms). Shapes of s, p and d atomic orbitals, nodal planes. Rules for filling electrons in various orbitals, electronic configurations	15

	of the atoms. Stability of half-filled and completely filled orbitals, concept of exchange energy. Relative energies of atomic orbitals, Anomalous electronic configurations.	
	Fundamentals of Organic Chemistry Basic Organic Chemistry Curved arrow notation, drawing electron movement with arrows, half and double headed arrows, in organic reaction mechanisms. Physical Effects, Electronic Displacements: Inductive Effect, Mesomeric effect, Resonance and Hyperconjugation. Cleavage of Bonds: Homolysis and Heterolysis. Structure, shape and reactivity of organic molecules: Nucleophiles and electrophiles. Reactive Intermediates: Carbocations, Carbanions and free radicals. Strength of organic acids and bases: Comparative study with emphasis on factors affecting pKa values. Aromaticity: Benzenoids and Hückel's rule.	08
	Aliphatic Hydrocarbons: Functional group approach for the following reactions (Preparations & reactions) to be studied in context to their structure Alkanes: Preparation: Wurtz reaction, Kolbe's synthesis, Reactions: Free radical Substitution: Halogenation. Alkenes: Preparation: Elimination reactions: Dehydration of alcohols and dehydrohalogenation of alkyl halides Reactions: Addition of HX (Markownikoff's and anti-Markownikoff's addition) Alkynes: Preparation: Acetylene from CaC ₂ and conversion into higher alkynes; by dehalogenation of tetra halides and dehydrohalogenation of vicinal-dihalides. Reactions: formation of metal acetylides, addition of HX and bromine.	07
	Total:	45
Pedagogy	Mainly lectures and tutorials. Seminars / term papers /assignments / presentations /industry visits/ self-study or a combination of some of these can also be used. ICT mode should be preferred. Sessions should be interactive in nature to enable peer group learning.

Course Outcome:	At the end of the course, students will be able to 1. Identify the properties of liquid and gases. 2. Explain the applications of liquid and gases. 3. Elucidate the atomic structure based on Quantum theory. 4. Identify the use of curved arrow notations in organic reaction mechanisms. 5. Understand various methods of preparation and reactions of alkanes, alkenes and alkynes.

Title of the course: Fundamentals of Chemistry

Number of Credits: 01 (Practicals)

Pre-requisites	Nil	
Course Objectives:	<ul style="list-style-type: none"> To translate certain theoretical concepts learnt earlier into experimental knowledge by providing hands on experience of basic laboratory techniques required for chemistry. To introduce the fundamentals and basic techniques of volumetric and gravimetric estimations. 	
Content		No of hours
	1. Determination of surface tension of two unknown liquids or dilute solutions by stalagmometer method.	04
	2. Determination of viscosity of two unknown liquids or dilute solutions by using Ostwald's viscometer.	04
	3. Study of the variation of viscosity of an aqueous solution with concentration of solute.	02
	4. Pre-Lab session (Laboratory safety, concept of normality and molarity and stoichiometric calculations)	02
	5. Calibration of Burette and Pipettes.	02
	6. To prepare 100 mL of standard 0.1 M $K_2Cr_2O_7$ solution and carry out dilution to 0.05, 0.01, 0.005, and 0.001 M in 100 mL standard flasks	02
	7. Volumetry: To prepare 100 ml of 0.1 N KHP solution and standardize the given approximate 0.1 N NaOH solution.	02
	8. Gravimetric analysis: Determination of percentage composition of the given mixture $ZnO + ZnCO_3$	02
	9. Purification of organic compounds:	06
	(i) Recrystallization of Benzoic acid by using water as solvent and determination of melting point.	
	(ii) Distillation of Acetone and determination of boiling point.	
	(iii) Sublimation of Naphthalene and Determination of Melting	

	point. 10. Determination of solubility and chemical nature of both solids and liquids. Water insoluble (Acid//phenol/ Base/Neutral) and water soluble (Acid/Neutral) of given compound. (8 compounds to be analysed)	04
	Total:	30
Pedagogy:	Students should be given suitable pre- and post-lab assignments and explanation revising the theoretical aspects of laboratory experiments prior to the conduct of each experiment. Each of the experiments should be done individually by the students.

Course outcomes	<ol style="list-style-type: none"> 1. To acquire the knowledge and skill of basic volumetric and gravimetric estimations. 2. The students will be able to get hands on experience on the purification techniques for organic compounds. 3. The students will be able to get hands on experience on the identification of chemical nature of organic compounds 	

Name of the Programme: B.Sc. Industrial Chemistry
Course Code: ICD-100 Major
Title of the course: Fundamentals of Industrial chemistry
Number of Credits: 3T+1P
Effective from AY: 2023-24

Pre-requisites	Nil	
Course Objectives:	<ul style="list-style-type: none"> The aim of this course is to make students aware of organic and inorganic aspects of industrial chemistry. To acquaint the students with the basic chemistry of different materials used in industry To encourage the students to utilize this knowledge for any ancillary unit to the main industry. 	
Content		No of hours
	Introduction to Industrial Chemistry and The Chemical Industry Introduction, The difference between Classical and Industrial Chemistry, Classification of Industries, The Chemical Industry, Basic requirements of Chemical Industries, Chemical production, Raw materials, Unit processes and unit operations. Quality control, Quality assurance, process control, research and development, pollution control, human resource, safety measures, economics of chemical process, selection of parameters of chemical industry, classification of chemical reactions, batch and continuous operations, industrial chemical reactions, intellectual property (IP).	15
	Industrial aspects of Organic Chemistry Raw material for organic compounds: Petroleum, natural gas, fractionation of crude oil, reforming, hydroforming, isomerisation. Fuel: Types of fuels – Advantages and Disadvantages. Classification of fuels, Calorific values, Determination of calorific value using Bomb's calorimeter & Boy's gas calorimeter.	15
	Industrial aspects of Inorganic Chemistry Inorganic materials of industrial importance: Alumina, silica, silicates, clay, mica, carbon, zeolites. Their availability, forms, structure and modifications. Basic Metallurgical operations: Pulverization, calcinations, roasting, refining of metals. Definition of the terms & illustration of the concept with suitable examples.	15
	Total:	45
	Laboratory course: (30 Hrs) (01 credit) 1. Acquaintance with a safety measures in a laboratory. (Demonstration and knowledge regarding handling chemicals, equipment and apparatus, flammable materials, storage and disposal of chemicals and solid wastes, guidelines in case of accident or injury)	3
	2. To find out the melting points of organic compounds.	3
	3. To find out the boiling points of organic compounds.	3
	4. Simple laboratory techniques:	
	5. 1. Crystallization from water (Demonstrations and experiments): i) Sodium Chloride ii) Copper Sulphate 2. Crystallization from C ₂ H ₅ OH (Demonstrations and experiments):	6

	i) Benzoic acid ii) Acetanilide 3. Distillation of: i) Water ii) Acetone 4. Fractional distillation of: i) Acetone and water	6 3
	Total:	30
Pedagogy	Mainly lectures and tutorials. Seminars / term papers /assignments / presentations /industry visits/ self-study or a combination of some of these can also be used. ICT mode should be preferred. Sessions should be interactive in nature to enable peer group learning.

Course Outcome:	At the end of the course, students will be able to 1. Learn difference between classical and industrial chemistry 2. Understand basic requirements of chemical industries and knowledge regarding basic terms involved in industrial chemistry 3. Describe different raw materials like petroleum, natural gas for synthesizing organic compounds. 4. To study techniques like fractionation of crude oil, reforming, hydroforming, isomerization carried out in petroleum refineries and to understand the availability, forms, structure and modifications of various inorganic materials of industrial importance. 5. To understand concepts in adsorption, to learn about colloids, emulsions, micro emulsions, micelles & aerosols.	

Name of the Programme: B.Sc. Industrial Chemistry

Course Code: CHC-111

Title of the course: Basic Concepts in Chemistry

Number of Credits: 4+0

Effective from AY: 2023-24

Pre-requisites	Nil	
Course Objectives:	<ul style="list-style-type: none">• To define the terms and state laws involved in thermodynamics and chemical equilibrium.• To solve numerical based on chemical energetics and chemical equilibrium.• To understand the development of periodic table and periodic trends.• To explain the theories of acids and bases.• To understand IUPAC nomenclature of organic compounds.• To understand the types of organic reactions, reactive intermediates and importance of selected organic compounds.	
Content		No of hours
	Thermodynamics I Thermodynamics I: Definition of thermodynamic terms, system, surroundings etc. Types of thermodynamic systems and thermodynamic processes. Intensive and extensive properties. Concept of heat and work, first law of thermodynamics, definition of internal energy and enthalpy. Heat capacity – heat capacities at constant volume and at constant pressure and their relationship, calculation of w, q, dU & dH for the expansion of ideal gases under isothermal and reversible conditions. Numerical problems are expected	08
	Solutions Solutions of liquids in liquids, Raoult's law and deviation from Raoult's Law (Ways of expressing concentration: Molarity, Normality, Molality Mole fraction, parts per million) Solutions of gases in Liquids: Factors influencing the solubility of gases. Henry's law. Numerical problems	05
	Chemical Equilibrium Free energy change in a chemical reaction. Thermodynamic derivation of the law of chemical equilibrium. Definition of ΔG and ΔG° , Le Chatelier's principle. Relationships between K_p , K_c and K_x for reactions involving ideal gases.	07
	Introduction to the periodic table Development of the periodic table- Dobereiner's Triads, Newland's Law of Octaves, Mendeleev's periodic table and Modern periodic table (Theories and limitations), Classification of the elements into s,p,d and f-block elements on the basis of electronic configuration, Trends in the periodic table (atomic and ionic size) Acid- Base Theories Arrhenius Concept, Bronsted Theory, The Lux – Flood Solvent Systems, Solvent System theory and Lewis Concept of Acids and Bases. (Theories and limitations)	12 08

	Carbon, IUPAC nomenclature of organic compounds, and aromaticity. Valency of carbon-structure of methane, sp^3 hybridisation. Selected functional group of organic compounds with IUPAC nomenclature (alkanes, alkenes, alkynes, alcohols, ethers, carboxylic acids, esters, thiol, amine, amides, halides, nitriles, nitro compounds aldehydes and ketones). Concept of aromaticity, Huckel's Rule, nomenclature of benzenoids (halo, nitro, alkyl), naphthalene and anthracene compounds.	10
	Types of organic reactions and structure, properties and uses of selected organic compounds Types of organic reactions with two examples of each: addition, elimination, substitution, oxidation, reduction and rearrangement. Structure and stability of intermediates carbocation, carbanion, free radical. Structure, properties and uses of the following selected organic compounds. Ethanol, acetone, ethyl acetate, formaldehyde, acetylene, benzoic acid, n-butane, chloroform, diethyl ether, cresol, benzaldehyde, aniline, urea, glucose, lauric acid. Preparation of ethanol, benzoic acid, acetone, acetylene, ethyl acetate, diethyl ether.	10
	Total:	60
Pedagogy	Mainly lectures and tutorials. Seminars / term papers /assignments / presentations /industry visits/ self-study or a combination of some of these can also be used. ICT mode should be preferred. Sessions should be interactive in nature to enable peer group learning.

Write the names and structures of the organic compounds using IUPAC nomenclature. 6. Understand the importance of selected organic compounds.

Name of the Programme: B.Sc. Industrial Chemistry

Course Code: ICD -111

Title of the course: General Industrial Chemistry

Number of Credits: 4+0

Effective from AY: 2023-24

Pre-requisites	Nil	
Course Objectives:	<ul style="list-style-type: none">To make students to understand basics in industrial chemistry.The important operations like distillation, evaporation, mixing and crystallization will prove their indispensability in chemical industry.To make students aware about basic instrumental techniques used in industry.	
Content		No of hours
	Nomenclature: Generic names, Trade names and nomenclature of some industrially important chemicals	5
	Dimensions and Units: Basic chemical calculations – atomic weight, molecular weight, equivalent weight, Mole concept, Avogadro's number, composition of liquid and gaseous mixtures.	5
	Renewable Natural Resources: Cellulose & Starch. Their properties & modifications. Important industrial chemicals derived from cellulose & starch. Alcohols, ethanol (industrial solvent) and alcohol-based chemicals, including oxalic acid & furfural.	15
	Unit operations: Distillation: Introduction- Single and fractional distillation, Batch and continuous distillation. Azeotropic and extractive distillation Evaporation: Introduction- Equipments- short tube (standard) evaporator, forced circulation evaporators, falling film evaporators, climbing film (outward flow) evaporators & wiped film (agitated) evaporators.	15
	Mixing: Concept of Mixing, Types of Mixers Crystallization: Crystal geometry, principles of crystallization, nucleation, crystal growth, vacuum crystallizer Industrial pollution: Pollutants and their statutory limits, pollution evaluation methods. Solid waste management & Industrial safety.	10
	Basic analytical equipment: Principles, working & applications of pH meter, conductivity meter, potentiometer, colorimeter.	10
	Total:	60
Pedagogy	Mainly lectures and tutorials. Seminars / term papers /assignments / presentations /industry visits/ self-study or a combination of some of these can also be used. ICT mode should be preferred. Sessions should be interactive in nature to enable peer group learning.

	6. Unit Operations in Chemical Engineering, Warren McCabe, Julian Smith, Peter Harriott 7. Unit Operations – I, K A Gavhane, 25 th Edition, Nirali Prakashan. 2015. 8. Instrumental methods of Chemical Analysis by B K Sharma, Krishna Prakashan, 2014. 9. Analytical Chemistry by Gary Christian, Kevin A. Schug, & Purnendu Dasgupta, 7 th Edition, John Wiley & Sons. 2013.
Course Outcome:	At the end of the course, students will be able to 1. Study nomenclature and learn generic names, trade names & proper names of different industrially important compounds 2. Understand basic unit operations carried out in industries such as distillation, evaporation, mixing and crystallization and understand the instrumentation. 3. Understand about statutory limits of pollutants, the solid waste management and Industrial safety with respect to chemical hazards. 4. Understand principles, working and applications of basic analytical instruments

Name of the Programme: B.Sc. Industrial Chemistry

Course Code: CHC-131

Title of the Course: Introduction to Chemistry

Number of Credits: 3

Effective from AY: 2023-2024

Pre-requisites for the Course:	Nil	
Couse Objectives:	<ul style="list-style-type: none">• To introduce chemistry as a scientific discipline• To describe the development of chemistry• To describe the utility of chemistry in medical and industrial fields.• To explain the underlying chemical aspects of chemistry in environment and pollution.• To introduce important Indian scientists and discuss their valuable contributions.	
Content:		No of hours
	1. Importance of science in life Towards scientific approach, involvement of science in daily life, different branches of science: significance and applications (viz: chemistry, physics, biology, microbiology, medical science etc.)	04
	2. History and development of Chemistry History of Chemistry, Different branches of chemistry (Organic, Physical, Inorganic, Analytical, Pharmaceutical, Green chemistry): their evolution and progress. Wöhler's synthesis of urea, Relations of heat to chemical phenomena, Antoine Lavoisier-Mercury Calx, M. Tswett's invention of Chromatography, P. Anastas's principles of Green Chemistry, Important Discoveries in chemistry: Hydrogen, Oxygen, Concept of Atom, X-ray, Rubber, Penicillin, Nuclear reactor, Plastic.	08
	3. Chemistry in medical sciences Classification of Drugs, names and uses of the following drugs with one example each: Antibiotics, Analgesics, Antihistamines, Anticonvulsant, Hypnotics and Sedatives.	04
	4. Medicinal plants Introduction: Importance of plant kingdom in general and medicinal plants in particular. Viz. Tulsi, Aloe vera, Turmeric, Vinca rosea, Cinchona, Datura etc. Compounds obtained from them, their uses and applications.	05
	5. Chemistry & Industry Minerals and ores: general awareness, chemical plants: cost, environmental impact and recycling.	04
	6. Chemistry of Environment & Pollution Introduction to segments of Environment (Atmosphere, Hydrosphere, Lithosphere) Definition of pollutant, pollution. Air Pollution: Composition of Air, Acid rain, Greenhouse effect and Global warming, ozone layer depletion. Water Pollution: Water cycle, Hardness of water, Factors deteriorating the water quality, Eutrophication, Fluoride in drinking water Soil Pollution: Chemical composition of Soil, Soil pollutants,	08

	Effects of soil pollution, Control of soil pollution. 7. Indian Scientists and their contributions to nation 1. Jagdish Chandra Bose – Physicist (1858-1937). 2. Anandibai Joshi – Physician (1865 - 1887). 3. Sir C. V. Raman – Nobel laureate & Physicist (1888-1970). 4. Janaki Ammal – Botanist (1897 - 1984). 5. Kamala Sohonie – Bio-chemist (1912 – 1998). 6. Asmita Chatterjee – Chemist (1917 – 2006) 7. Anna Mani – Physicist and meteorologist (1918- 2001). 8. Rajeshwari Chatterjee – Scientist (1922-2010). 9. A.P. J. Abdul Kalam – Scientist (1931-2015) 10. Darshan Ranganathan – Chemist (1941 – 2001). 11. Prof. C.N.R Rao- Chemist (1934) 12. S. Nambi Narayanan- Aerospace Scientist (1941) 13. Raghunath Mashelkar- Chemical Engineer (1943)	12
	Total:	45
Pedagogy:	Mainly lectures and tutorials with assignments

Course Outcomes:	<p>Students will be able to:</p> <ol style="list-style-type: none"> 1. Describe the chemistry as a scientific discipline. 2. Describe the development and branches of Chemistry 3. Appreciate the utility of chemistry in day-to-day life. 4. Explain the preliminary chemical aspects of environment and pollution. 5. Describe and appreciate the contributions of important Indian scientists.

Name of the Programme: B.Sc. Industrial Chemistry

Course Code: CHC-141

Title of the course: Water and Soil Analysis

Number of Credits: 1T+2

Effective from AY: 2023-24

Pre-requisites	Nil	
Course Objective:	<ul style="list-style-type: none">To define the various terms encountered in sampling and study the techniques involved.To study methods that can be employed for the determination of the various physico-chemical parameters of water and soil.	
Content		No of hours
	1. Sampling Techniques: Terms encountered in sampling: the population or the universe, Sample, Sampling unit, increment, the gross sample, the sub sample, Analysis sample, Bulk ratio, Size to weight ratio, Random sampling, Systematic sampling, Multistage sampling, Sequential sampling. Sampling of Liquids and Solids. Preservation, storage and preparation of sample solution.	05
	2. Analysis of soil: Composition of soil, Concept of pH and pH measurement, chelation, chelating agents, use of indicators. Bulk density, Specific gravity, moisture content, water holding capacity, pH, electrical conductivity, alkalinity, calcium, magnesium and organic matter.	05
	3. Analysis of water: Definition of pure water, sources responsible for contaminating water, water purification methods (For domestic and industrial waters). Water analysis: Dissolved oxygen, free carbon dioxide, B.O.D., C.O.D. and total carbohydrates	05
	Total:	15
Pedagogy	Mainly lectures and tutorials. Seminars / term papers / assignments / presentations / industry visits / mini projects / self-study or a combination of some of these can also be used. ICT mode should be preferred. Sessions should be interactive in nature to enable peer group learning.	
References / Readings	<ol style="list-style-type: none">A.K. De, <i>Environmental Chemistry</i>. New age international Publishers, 4th Edition. 2007B. K. Sharma, <i>Environmental Chemistry</i>. K. Kataria and SonsPandey O.P./Bajpai D.N. and Giri S. <i>Practical Chemistry</i>, S Chand Publications	
Course Outcome:	At the end of the course students will be able to <ol style="list-style-type: none">Understand the fundamentals and techniques of water and soil sampling.To describe the methods for the determination of various physico-chemical parameters of soil and water	

Title of the course: Water and Soil Analysis**Number of Credits: 02 (Practicals)**

Pre-requisites	Nil	
Course Objectives:	<ul style="list-style-type: none">• To help in better understanding of the techniques of sampling soil and water studied in theory, through demonstration.• To apply the knowledge studied in theory for the determination of various physico-chemical parameters of soil and water and thereby develop related skills.	
Content		No of hours
	1. Techniques of soil sampling (Demonstration) 2. Determination of pH of soil sample 3. Determination of Bulk density of soil sample 4. Determination of Moisture content of soil sample 5. Determination of conductivity of soil sample 6. Determination of organic content in soil sample 7. Techniques of water sampling (Demonstration) 8. Determination of pH and conductivity of a water sample 9. Determination of dissolved oxygen (DO) in a given water sample 10. Determination of magnesium content 11. Determination of total hardness in the water sample 12. Determination of acidity of a water sample 13. Determination of alkalinity in a given water sample 14. Measurement of dissolved CO ₂ 15. Determination of total solids in water.	15 x 4 = 60
	Total:	60
Pedagogy:	Students should be given suitable pre- and post-lab assignments and explanation revising the theoretical aspects of laboratory experiments prior to the conduct of each experiment. Minimum two samples each to be analysed for every experiment involving soil and water analysis (4 hours each practical session).	
References / Readings	1. A. K. De, <i>Environmental Chemistry</i> . New age international Publishers, 4 th Edition. 2007 2. B. K. Sharma, <i>Environmental Chemistry</i> . Krishna Prakashan Media (P) Ltd. 2014. 3. Svehla, G. <i>Vogel's Qualitative Inorganic Analysis</i> , Pearson Education, 2012. 4. Mendham, J. <i>Vogel's Quantitative Chemical Analysis</i> , Pearson, 2009. 5. Dr Sunita Rattan <i>Experiments in Applied chemistry</i> ,3 rd Edition 2011-S. K. Kataria and Sons 6. Pandey O.P./Bajpai D.N. and Giri S. <i>Practical Chemistry</i> , S Chand Publications	
Course outcomes	At the end of the course students will be able to: 1. Observe and understand the techniques employed for soil and water sampling. 2. Develop skill for the determination of the various physico-chemical parameters of soil and water.	

Name of the Programme: B.Sc. Industrial Chemistry
Course Code: CHC-142
Title of the course: Skills in Qualitative Organic Analysis
Number of Credits: 1+2
Effective from AY: 2023-24

Pre-requisites	Nil	
Course Objective:	<ul style="list-style-type: none"> To understand the theoretical aspects of qualitative organic analysis To explain mechanistically the chemical tests in qualitative organic analysis. 	
Content		
	1. Chemical nature of organic compounds Nature of organic compounds based on physical state of the following compounds: benzoic acid, m-nitroaniline, β -naphthol, acetone, aniline, naphthalene, benzophenone, m-dinitrobenzene (to be shown with structure); presence of saturated and unsaturated compounds using bromine water, potassium permanganate solution; water solubility of organic compounds (any two water soluble and water insoluble compounds); chemical nature of organic compounds (to be explained with reactions)- water insoluble acid/phenol/base/neutral, water soluble acid/phenol/neutral.	No of hours 07
	2. Analysis of hetero elements and functional groups Detection and presence of hetero elements - N/S/X (to be explained with reactions); Detection and presence of functional groups – CH(O) acid- salicylic acid, CH(O) phenol- β -naphthol, CH(O) neutral- acetone, benzaldehyde, ethyl acetate and ethanol, CH(O)N acid p-nitrobenzoic acid, CH(O)N phenol -nitrophenol, CH(O)N base - nitroaniline , CH(O)N neutral- urea, CH(O)N,S neutral- thiourea, CH(O)Cl neutral- chlorobenzene (to be explained with reactions).	06
	3. Purification Techniques Recrystallisation, distillation, sublimation. Determination of physical constants of organic compounds- melting point, boiling point.	02
	Total:	15
Pedagogy	Mainly lectures and tutorials. Seminars / term papers /assignments / presentations / mini projects / self-study or a combination of some of these can also be used. ICT mode should be preferred. Sessions should be interactive in nature to enable peer group learning.	
References / Readings	1. Vogel, A.I., Tatchell, A.R., Furnis, B.S., Hannaford, A.J. & Smith, P.W.G., <i>Textbook of Practical Organic Chemistry</i> , Prentice-Hall, 5th edition, 1996. 2. Mann, F.G. & Saunders, B.C. <i>Practical Organic Chemistry</i> Orient-Longman, 1960. 3. Pandey, O.P., Bajpai D. N. & Giri S. <i>Practical Chemistry</i> , Revised Edition, (For BSc. I, II, III Year Students of All Indian Universities) S. Chand Company Pvt Limited, 2014. 4. N. K. Vishnoi, <i>Advanced Practical Organic Chemistry</i> , third edition, 2010.	
Course Outcome:	At the end of the course students will be able to 1. Explain reactions involved in identifying the chemical nature of organic compounds. 2. Understand role of sodium fusion extract in detecting the presence of heteroelements. 3. Explain the reactions of various functional groups present in organic compounds. 4. Understand the need for purification techniques in organic analysis.	

Laboratory Course**Number of Credits: 02**

Pre-requisites	Nil	
Course Objective:	<ul style="list-style-type: none">To get hands on experience for the systematic qualitative analysis of the organic compounds.To learn the purification techniques for organic compounds.	
Content		No of hours
	1. Purification of organic compounds:	
	(i) Solids by recrystallization process using water and ethanol as solvent and determination of melting point.	4
	(ii) Simple distillation of acetone and determination of boiling point.	2
	(iii) Sublimation of naphthalene/ anthracene/ camphor and determination of melting point.	2
	2. Identification of unknown organic compounds based on water solubility, chemical type, elemental analysis, group test and physical constants (organic spotting)	
	(i) Water soluble solids (Acid and Neutral) – Any 3	(3×4 = 12)
	(ii) Water insoluble solids (Acid, Base, Phenol and Neutral) – Two compounds to be analysed of each category.	(8×4 = 32)
	(iii) Liquids: Water miscible neutral, water immiscible (base/ neutral)	(2×4 = 08)
	Total:	60
Pedagogy:	Mainly laboratory work to be demonstration to students, supervision of their labwork. Prelab and Post-lab exercises / journal assessment.	
References / Readings	<ol style="list-style-type: none">Vogel, A.I., Tatchell, A.R., Furnis, B.S., Hannaford, A.J. & Smith, P.W.G., Textbook of Practical Organic Chemistry, Prentice-Hall, 5th edition, 1996.Mann, F.G. & Saunders, B.C. Course outcomes	At the end of the course students will be able to: <ol style="list-style-type: none">Get hands on experience for the systematic qualitative analysis of the organic compounds.Acquire skills in applying purification and separation techniques for organic compounds	

Name of the Programme: B.Sc. Industrial Chemistry
Course Code: CHC-143
Title of the course: Chemistry of Cosmetics and Perfumes
Number of Credits: 1T+2P
Effective from AY: 2023-24

Pre-requisites	Nil	
Course Objective:	<ul style="list-style-type: none"> To explain the term Cosmeticology and define cosmetics. To describe preparation and uses of cosmetic products. To define herb and classify herbal cosmetics. To study the formulation and preparation of herbal skincare and haircare products. To understand the classification of perfumes and categorise as per the ingredients. To understand the importance of essential oils in cosmetic industries. To describe the general methods of obtaining volatile oils from plants and its composition of volatile oils. 	
Content		No of hours
	1. Chemistry of Cosmetics Meaning of Cosmeticology. Definition of cosmetics as per EU and Indian guidelines. A general study including preparation and uses of the following: Hair dye, shampoo, face powder, shampoo, lipsticks, talcum powder, creams (cold, vanishing and shaving creams). Definition of herb, herbal medicine, herbal medicinal product, herbal drug preparation. Classification of herbal cosmetics. Herbal cosmetics for skin care (face packs, soaps). Herbal cosmetics for hair care: Henna and Hibiscus	08
	2. Chemistry of Perfumes Definition of Perfume. Formulation of Perfume. Sense of perfume smell-Top notes, middle notes and base notes. Classification of perfumes: Traditional and Modern. Fragrance Wheel. Comparison between deodorant and antiperspirant. Triclosan as antibacterial agent-Structure. Benefits and adverse effects of perfumes. Natural and artificial flavours with examples. Essential oils and the importance in cosmetic industries with reference to peppermint oil- Menthol, clove Oil- Eugenol, lemongrass-Geraniol, Structure, synthesis and use of 2-phenyl ethyl alcohol, Sources, Structure and uses of Jasmone, Civetone, Muscone. Methods of separation of essential oils (steam, water and vacuum distillation), solvent extraction, mechanical expression.	07
	Total:	15
Pedagogy	Mainly lectures and tutorials. Seminars / term papers / assignments / presentations / industry visits / mini projects / self-study or a combination of some of these can also be used. ICT mode should be preferred. Sessions should be interactive in nature to enable peer group learning.

Olindo Secondini, <i>Handbook of Perfumes and Flavors</i>, 1990.
Course Outcome:	<p>At the end of the course students will be able to</p> <ol style="list-style-type: none"> 1. Define cosmetics as per EU and Indian guidelines. 2. Describe the preparation and uses of various cosmetic products mentioned. 3. Describe the formulation and packaging of cosmetics for hair - Shampoo and hair dye. 4. Classify herbal cosmetics. 5. Explain the terms herbal medicine and herbal medicinal products. 6. Describe the preparation of herbal drug. 7. Describe the formulation and preparation of Herbal cosmetics for skin care and hair care. 8. Classify the perfumes and categorize the perfume ingredients. 9. Explain the importance of essential oil in cosmetic industries. 10. Describe the composition of different volatile oils and methods of obtaining them.

Laboratory Course**Number of Credits: 02**

Pre-requisites	Nil	
Course Objective:	<ul style="list-style-type: none"> To translate certain theoretical concepts learnt earlier into experimental knowledge by providing hands on experience of basic laboratory techniques required for Cosmeticology and perfume chemistry. To understand the concept of cosmetics and develop formulation skills in the preparation of various cosmetic products. 	
Content		No of hours
	1. Preparation of cosmetic products. (Any 8) Explain in brief about cosmetic ingredients Talcum powder, face powder, Shampoo, hair dye, Cold cream, Vanishing cream, Nail polish, nail polish remover, Shaving cream, Toothpaste, Lipsticks, eyeliner.	(8 x 3) = 24
	2. Preparation of Herbal cosmetics and its evaluation. (Any 4) Turmeric face pack, Papaya face pack, Henna hair dye, Herbal lotion, Herbal soap, Herbal shampoo	(4 x 4)=16
	3. Extraction of essential oils as perfumery and identification of compound. (Any 5) a) Steam distillation of cinnamon sticks to cinnamon oil and identification of Cinnamaldehyde. b) Steam distillation of cloves to clove oil and identification of Eugenol. c) Water distillation of lemon peel/Orange peel to give D-Limonene. d) Extraction of banana oil from bananas (Esters as perfumery). e) Extraction of rose oil f) Extraction of citronella oil from lemongrass plant. g) Extraction of caffeine from tea. h) Extraction of jasmine oil from Jasmine flowers and identification of jasmone.	(5 x 4) = 20
	Total:	60
Pedagogy:	Students should be given suitable pre- and post-lab assignments and explanation revising the theoretical aspects of laboratory experiments prior to the conduct of each experiment.	
References / Readings	1. A.I. Vogel, A., R. Tatchell, B. S. Furniss, A.J. Hannaford, Vogel's <i>Textbook of Practical Organic Chemistry</i> , 5 th Ed., Prentice Hall; 2011. 2. Maibach, <i>Handbook of Cosmetic Science and Technology</i> -Third and fourth Edition, 2009. 4. ProFound Klaus Duerbeck, <i>Natural Ingredients for Cosmetics</i> , 2005.	
Course outcomes	At the end of the course students will be able to: <ol style="list-style-type: none"> Understand the concepts of various cosmetic products. Prepare various cosmetic products. Prepare various herbal cosmetic products. Extract naturally flavoured compounds/essential oils. 	

Name of the Programme: B.Sc. Industrial Chemistry

Course Code: ICD-141

Title of the course: Analysis of food products

Number of Credits: 1T+2P

Effective from AY: 2024-25

Pre-requisites	Nil	
Course Objectives:	<ul style="list-style-type: none">• To develop a solid theoretical foundation by understanding the principles of food analysis, including the composition of macronutrients, the role of additives, contaminants in food.• To acquire hands-on laboratory skills, enabling students to proficiently analyze food samples.• To gain practical knowledge in quality control practices within the food industry and to apply this knowledge to maintain and ensure the safety and quality of food products.	
Content		No of hours
	Introduction to food analysis, food composition and nutritional analysis, proteins, carbohydrates, fats, food additives, food contaminants, quality control in food industry, physical, chemical and microbial analysis of food, regulatory standards in food analysis – Food Safety and Standards Authority of India, Food processing, preservation and storage.	15
	Total:	15
	Laboratory course: (60 Hrs) (02 credit) <ol style="list-style-type: none">1. To find out the moisture content from a given food sample by lab oven method.2. To find out the ash in the given food sample.3. To find out the amount of crude fat in a given food sample.4. Estimation of titrable acidity in fruit juices5. Determination of peroxide value6. Separate and identify the lipids in some common foods using thin-layer chromatography7. To find out the amount of crude fiber in a given food sample.8. Determine the vitamin C (ascorbic acid) content in fruit juices using iodometric titration.9. Detection of adulterants in different food products / crude drugs<ol style="list-style-type: none">a. Sugar in Honeyb. Starch in milkc. Vanaspati or Margarine in gheed. Metanil yellow in food productse. Brick powder in chilli powderf. Tamarind seed powder and date seed powder in coffeeg. Dried papaya seeds in pepper	
	Total:	60
Pedagogy	Mainly lectures and tutorials. Seminars / term papers /assignments / presentations /industry visits/ self-study or a combination of some of these can also be used. ICT mode should be preferred. Sessions should be interactive in nature to enable peer group learning.	

References / Readings, References for practicals	<ol style="list-style-type: none"> 1. Food chemistry by Alex V Raman, MJP publishers, 2009 2. Food Analysis Laboratory Manual, Third Edition edited by S. Suzanne Nielsen Purdue University West Lafayette, IN, USA, Springer, 2019 3. A food technology lab manual by Rashida Rajuva TA & Joy PP, Kerala Agricultural University, 2014 4. Handbook of Food Chemistry, Peter C.K. Cheung, Bhavbhuti M. Mehta, Springer, 2015
Course Outcome:	<p>At the end of the course,</p> <ol style="list-style-type: none"> 1. Students will grasp the fundamental principles of food analysis, including the composition of proteins, carbohydrates, and fats. 2. Through extensive lab work, students will cultivate practical skills, including the analysis of moisture, ash, crude fat, acidity, peroxide levels, and vitamin C in diverse food samples. 3. Students will also gain knowledge in quality control practices within the food industry, along with an understanding of regulatory standards. 4. Students will learn to apply acquired knowledge by identifying common adulterants in various food products, fostering a broader appreciation for the practical implications of food processing and safety.
