GU/Acad -PG/BoS -NEP/2024/523

In supersession to the Circular No. GU/Acad –PG/BoS -NEP/2024/380 dated 30.07.2024, the syllabus of Semester III & IV of the **Master of Science (Integrated) in Data Science** Programme approved by the Academic Council on 09<sup>th</sup> May 2025 is attached. The Syllabus of Semester I and II approved earlier by the Standing Committee of the Academic Council in its meeting held on 10<sup>th</sup> & 11<sup>th</sup> May 2024 is enclosed.

The Dean/ Vice-Deans of the Goa Business School are requested to take note of the above and bring the contents of the Circular to the notice of all concerned.

(Ashwin V. Lawande)

Deputy Registrar – Academic

#### To,

- 1. The Dean, Goa Business School, Goa University.
- 2. The Vice-Deans, Goa Business School, Goa University.

#### Copy to:

- 1. The Chairperson, BOS in Data Science and Artificial Intelligence.
- 2. The Controller of Examinations, Goa University.
- 3. The Assistant Registrar, UG Examinations, Goa University.
- 4. The Assistant Registrar, PG Examinations, Goa University
- 5. Directorate of Internal Quality Assurance, Goa University for uploading the Syllabus on the University website.

#### **SEMESTER I**

#### **Major Courses**

Name of the Programme : Master of Science (Integrated) in Data Science

Course Code : IDS-100

Title of the Course : Mathematics Foundations

Number of Credits : 4 Effective from AY : 2024-25

Effective from A1	: 2024-25	
Pre-requisites for the Course:	NIL	
Course Objectives:	<ol> <li>To introduce the students to</li> <li>develop logical reasoning among students</li> <li>organize all aspects of mathematics</li> <li>understand on the fundamental concepts, assumptions and p of mathematics</li> </ol>	rinciples
Units	Content	No. of hours
1	Logic and Propositional Calculus:  Propositions and Compound Statements; Basic Logical Operations; Propositions and Truth Tables; Tautologies and Contradictions; Logical Equivalence; Algebra of Propositions; Conditional and Biconditional Statements.  Sets:  Sets and their representation; The empty set; Finite and Infinite Sets; Equal Sets; Subsets; Power Set; Universal Set; Union and Intersection of sets; Venn Diagrams; Operations on Sets; Complement of a set.  Relations and Functions:  Cartesian product of sets; Relation and their types; Functions and their types; Algebra of functions; Composition of functions; Invertible functions; Binary operations.	15

II	Limits: Geometric meaning of limits; Standard limits. Continuity: Geometric meaning of continuity; Continuous functions; Algebra of continuous functions; Examples of continuous functions; Discontinuities; Types of Discontinuities. Differentiability: First principle of differentiation; Algebra of differentiability namely sum/product/quotient rule; Examples; Result that every differentiable function is continuous; Derivative of the composition; Chain rule; (Statements of these results only. However, the idea of the proof, though not a part of the syllabus, is encouraged) Examples; Optimization problems.	15
III	Understanding Integrals integration and its relation to differentiation; antiderivatives; indefinite integrals and methods; definite integrals and interpretation as area under curve; linearity of integration; fundamental theorem of calculus Application of Integrals Geometric: area under curve and volumes; Physics: displacement from velocity and velocity from acceleration; Economics: consumer and producer surplus; Probability: probabilities using integrals	15
IV	Complex Numbers: Algebra of complex numbers; Modulus and Complex conjugate; Argand plane and polar representation. Vector Algebra: Types of vectors; Addition of vectors; Multiplication of a vector by a scalar; Dot product and cross product of vectors, and their geometrical interpretation; Concept and computation of gradient, divergence, and curl of a vector field.	15
Pedagogy:	Lectures/ Case Analysis/ Assignments/ Classroom Interaction/Qu	ıiz
References/ Reading:	<ol> <li>Kumar, A., Kumaresan, S., &amp; Sarma, B. K. (2018). A Foundation in Mathematics. Alpha Science International.</li> <li>Lipschutz, S., &amp; Lipson, M. (2022). Vector And</li> </ol>	Discrete fill. (2017). onal.

#### On completion of the course, students will be able to: 1. Infer the truth of various sentences and its equivalents and outline various properties of sets. Course 2. Examine and Identify the types of relations and functions.

# **Outcomes:**

- 3. Make use of the strong and weak induction.
- 4. Solve systems of linear equations.
- 5. Discuss the properties of determinants.

#### **Minor Courses**

Name of the Programme : Master of Science (Integrated) in Data Science

Course Code : IDS-111

Title of the Course : Problem Solving and Program Design

Number of Credits : 4(3T+1P) Effective from AY : 2024-25

Pre-requisites for the Course:	NIL	
Course Objectives:	<ol> <li>To introduce the learner to various concepts and the problem process</li> <li>To gain an understanding and attempt solving problems using tools and techniques</li> <li>To solve complex and/or large problems using compos structures</li> <li>To be able to design and build computer programs given a property of the problem.</li> </ol>	g various ite data
Units	Content	No. of hours
I	<ul> <li>Basic Concepts</li> <li>Problems solving process; Solution types; Solving by computer</li> <li>Constants &amp; Variables; Data Types &amp; Storage; Functions; Operators; Expression &amp; Equations</li> <li>Communicate with computer; methods to organize solution; solution planning tools; solution test &amp; code; SDLC</li> </ul>	<b>15</b> T
II	<ul> <li>Problem Solving Techniques</li> <li>Modules design; Cohesion-Coupling; variable scope, parameters &amp; return value</li> <li>Sequential Problem Solving by charts, algorithmic instruction, flowchart symbols and pseudocode</li> <li>Decision Problem Solving by various logic types; logic conversion; introduction to decision tables</li> <li>Iterative Problem Solving; loop vs go-to; incrementing &amp; accumulating; loop types; Recursion</li> </ul>	<b>15</b> T
III	<ul> <li>Problem Solving with Composite Data Structures</li> <li>Composite data structures; heterogeneous data in structures; dynamic-sized structures</li> <li>Lists (or arrays); element &amp; index; two-dimensional &amp; higher; row/column-major storage; map</li> <li>Introduction to linked list, graphs, trees</li> <li>Introduction to DBMS, class/object &amp; file processing</li> </ul>	<b>15</b> T

IV	Practical Work The assignments in the practicals will reinforce problem solving, programming logic and program design concepts.  It is recommended to use building block tools like PictoBlox, Scratch, TurtleArt, etc. and programming learning languages Kojo, Racket (DrRacket), etc.  Following is a suggested (non-exhaustive) list of assignments:  Creating simple geometric lines and shapes  Creating complex geometric shapes  Creating shapes for alphabets and numbers  Creating simple drawings of everyday objects  Moving character(s) on keyboard arrow  Demonstrating collision between character(s)  Creating a simple (points/score)-based game  Write scripts to perform arithmetic operations  Write scripts to demonstrate logical operations  Write scripts to perform string operations  Write scripts to calculate prime number(s), factorial(s), armstrong number(s), etc.  Write scripts to perform operation(s) on finite and infinite series'  Write scripts demonstrating use of parentheses, and nested expressions and invocations  Write scripts for simple games	30P
Pedagogy:	Lectures, Tutorials. Assignments, Seminars, Presentations combination of some of these can also be used. ICT mode sh preferred. Sessions should be interactive in nature to enable per learning.	ould be

Problem Solving and Programming. Tata McGraw Hill</li> <li>Maureen Sprankle, Jim Hubbard (2013). Problem Solving Programming Concepts. Pearson Education India.</li> </ol>	18). How mputing. salya, K.
Course Outcomes:	<ol> <li>On completion of the course, students will be able to:</li> <li>Remember the basic concepts &amp; terminologies of problem algorithms, flowcharts, pseudo-code, and debugging.</li> <li>Understand basic computing concepts, algorithm design, fl design, pseudo-code, programming constructs, and debugging.</li> </ol>	owchart

- 3. Apply problem solving & programming concepts in designing solutions to simpler problems using algorithm, flowchart and pseudocode.
- 4. Analyze a problem and apply the concepts learnt to develop & design solutions and programs

#### **Multi-disciplinary Courses**

Name of the Programme : Master of Science (Integrated) in Data Science

Course Code : IDS-131
Title of the Course : E-Commerce

Number of Credits : 3
Effective from AY : 2024-25

Effective from AY	: 2024-25	
Pre-requisites for the Course:	NIL	
Course Objectives:	<ol> <li>To give fundamental understanding of e-commerce and marketing</li> <li>To instill ideas of Search Engine Optimization and MacApplications of e- commerce and digital payments</li> <li>To identify, define and differentiate the e-commerce models of electronic commerce</li> </ol>	arketing,
Units	Content	No. of hours
	Introduction to Electronic Commerce  Basic Understanding of E-Commerce History of e-commerce Business applications of e-commerce E-Commerce Models (B2B, B2C, C2C, B2G) Applications of M-Commerce  E-Commerce on Internet Websites as marketplace Role of website in B2C e-commerce Website design principles Alternative methods of customer communication  Online Marketing Online marketing and advertising Push and pull approaches Web counters, Web advertisements Content marketing Need of Digital Marketing for a business	15

II	<ul> <li>Search Engine Optimization</li> <li>Search Engine Optimization (SEO), Search Engine Marketing (SEM)</li> <li>Social Media Marketing (SMM), Web Analytics</li> <li>Applications of E-commerce</li> <li>Applications of e-commerce to Supply chain management</li> <li>Applications of e-commerce to Customer Relationship Management</li> <li>Product and service digitization, Remote servicing</li> <li>Electronic Payment System</li> <li>Types of payment systems, credit cards, debit cards, mobile, etc., Electronic Fund Transfer (EFT)</li> <li>Operational credit and legal risk of e-payment, Risk management options for e-payment systems</li> </ul>	15
III	<ul> <li>Business to Consumer E-Commerce</li> <li>Cataloging</li> <li>Order planning and order generation, Cost estimation and pricing</li> <li>Order receipt and accounting, Order selection and prioritization</li> <li>Order scheduling, Order fulfilling, Order delivery</li> <li>Order billing, Post sales service</li> <li>Business to Business E-Commerce</li> <li>Need and Models of B2B e-commerce</li> <li>Using public and private computer networks for B2B trading</li> <li>EDI and paperless trading, Characteristic features of EDI service arrangement, EDI architecture and standards</li> <li>Security Issues in E-Commerce</li> <li>Risks of e-commerce</li> <li>Types and sources of threats; Security tools</li> <li>Risk management approaches</li> </ul>	15
Pedagogy:	Lectures, Tutorials. Assignments, Seminars, Presentations or a combination of some of these can also be used. ICT mode should be preferred. Sessions should be interactive in nature to enable peer group learning.	
References/ Reading:	<ol> <li>Kalakota, Ravi, Andrew Whinston (2015). Frontiers of El Commerce. Pearson Education</li> <li>P. T. Joseph (2015). E-Commerce: An Indian Perspective Pa PHI Learning.</li> <li>V. Rajaraman (2015). Essentials of E-Commerce Technology.</li> </ol>	perback.

# Course Outcomes:

On completion of the course, students will be able to:

- 1. Understand the foundation of e-commerce, e-commerce websites and Online Marketing and Security Issues
- 2. Explain the importance of Search Engine Optimization, Applications of E-commerce and Electronic Payment Systems
- 3. Have an in-depth understanding of B2B and B2C e-commerce models

#### **Skill Enhancement Courses**

Name of the Programme : Master of Science (Integrated) in Data Science

Course Code : IDS-141

Title of the Course : Programming in R

Number of Credits : 3 (1T+2P) Effective from AY : 2024-25

Effective from AY	: 2024-25	
Pre-requisites for the Course:	NIL	
Course Objectives:	<ol> <li>To understand critical programming language concepts</li> <li>To make use of R loop functions and debugging tools</li> <li>To configure and use various libraries &amp; packages with R</li> </ol>	
Units	Content	No. of hours
I	<ul> <li>The R programming language</li> <li>R language; variables, constants &amp; operators; data types, objects &amp; in-built library calls</li> <li>Decision &amp; iterative structures; functions</li> <li>Vectors, lists, matrices; arrays; data frames, factors</li> <li>Visualization using various charts/plots</li> <li>Statistical calculations</li> <li>Packages &amp; libraries with R</li> </ul>	<b>15</b> T
II	<ul> <li>Practical Work (Basic Programming in R)</li> <li>Assignments to practice arithmetic operations and expressions</li> <li>Assignments to practice working with an infinite series</li> <li>Assignments to practice working with arrays, matrix, vectors, list, factors</li> <li>Assignments to practice with dataframe</li> <li>Assignments to work with file processing</li> <li>Assignments to practice with various statistical calculations</li> </ul>	30P
III	<ul> <li>Practical Work (Visualization, Packages in R)</li> <li>Assignments to practice with various charts / graphs</li> <li>Assignments to use package(s) related to loading, manipulating &amp; modeling data</li> <li>Assignments to use package(s) related to visualizing &amp; reporting data</li> <li>Assignments to use package(s) related to work with spatial, time-series and financial data</li> </ul>	30P
Pedagogy :	Lectures, Tutorials. Assignments, Seminars, Presentations combination of some of these can also be used. ICT mode shapreferred. Sessions should be interactive in nature to enable per learning.	ould be

Course Outcomes:	<ul> <li>On completion of the course, students will be able to:</li> <li>1. Understand the various aspects and concepts in the R programming language</li> <li>2. Write code in R to load, manipulate, and visualize data</li> <li>3. Leverage using various packages/libraries of R for various data science related work</li> </ul>

#### **SEMESTER II**

## **Major Courses**

Name of the Programme : Master of Science (Integrated) in Data Science

Course Code : IDS-101

Title of the Course : Data Management

Number of Credits : 4

Effective from A	: 2025-20	
Pre-requisites for the Course:	NIL	
Course Objectives:	<ol> <li>Enables the learner to understand the different issues invertieving data from relational data systems</li> <li>Provides both theoretical knowledge and practical skills require creation, management and querying of data in spreadshed databases</li> </ol>	ed in the
Units	Content	No. of hours
I	<ul> <li>Overview of Data Handling Tools</li> <li>Overview of Files vs Spreadsheets vs Databases</li> <li>Data Types</li> <li>Hierarchy of Information</li> <li>Security</li> <li>Spreadsheets</li> <li>Sheets, data entry, cell referencing</li> <li>Sort/filter, Find/Replace, Auto-fill (flash-fill)</li> <li>Text manipulation functions, Lookup functions</li> <li>Conditional formatting, Pivot tables</li> <li>Databases</li> <li>Databases (DB); DB Architectures; Data Models; Schemas &amp; Instances</li> <li>Relational Data Model &amp; Introduction to Relational Algebra</li> <li>Introduction to Normalization &amp; Basic Normal Forms</li> </ul>	<b>15</b> T
II	<ul> <li>Practical Work (Data Handling Platforms/Tools)</li> <li>Getting Started with Spreadsheets (4 hours)</li> <li>Installation of spreadsheet software and add-ons</li> <li>Creation sheets, tables, etc.</li> <li>Data types, data entry</li> <li>Cell reference, sort/filter, find/replace, auto-fill (flash-fill)</li> <li>Data manipulation (8 hours)</li> <li>Functions (arithmetic/logical/string)</li> <li>Lookup functions</li> <li>Date-time functions</li> </ul>	30P

	Conditional formatting	
	o Pivot tables	
	<ul> <li>Data validation, drop-down list</li> </ul>	
	<ul> <li>Advanced Concepts in Spreadsheets (6 hours)</li> </ul>	
	o Macros	
	<ul> <li>Add-ons/Extensions for text analysis</li> </ul>	
	O Al agents in spreadsheets	
	Getting started with Database (12 hours)	
	o Installation of DBMS software(s)	
	o creation/modification of database tables	
	O Querying the data dictionary (meta-data of DB)	
	Structured Query Language (SQL)	
	SQL – DDL, DML, TCL	
III	Simple Queries	15T
	Constraints in SQL	
	Nested & Correlated Subqueries	
	·	
	Practical Work (SQL)	
	Getting Started with DML	
	o Populating tables, Adding Primary Keys, Candidate Keys,	
	Foreign Keys, and other Integrity Constraints to relations	
	<ul> <li>Updating and Deleting Rows of tables</li> </ul>	
	<ul> <li>Altering schema of existing tables</li> </ul>	
	Writing simple SQL queries	
	Querying Data	
	Various Operators	
IV	<ul> <li>Using alias to control column headings</li> </ul>	30P
	Using compound clauses and wildcards	
	O Sorting data	
	Arithmetic Operators and Built-in Functions	
	Writing Complex Queries	
	O Joins	
	O Aggregate Functions	
	o Group by and Having Clause	
	Subqueries – single-row and multiple-row	
	o Correlated Subqueries	
	·

(2005). Database systems: a practical approach to design, implementation, and management. Pearson Education. 5. Garcia-Molina, H. (2008). Database systems: the complete book. Pearson Education India. On completion of the course, students will be able to: 1. Understand and evaluate the role spreadsheets and databasse for data management in organizations. Course 2. Recognize a good design and understand the relational database Outcomes: design principles. 3. Use logical design methods used in the design of DB applications. 4. Understand the basics of SQL and construct queries using SQL.

#### **Minor Courses**

Name of the Programme : Master of Science (Integrated) in Data Science

Course Code : IDS-112

Title of the Course : Fundamentals of Statistics

Number of Credits : 4
Effective from AY : 2024-25

Pre-requisites for the Course:	NIL	
Course Objectives:	<ol> <li>To introduce the students to</li> <li>organize, summarize and analyze data</li> <li>draw appropriate conclusions from data</li> <li>apply statistical tools and techniques to real-world problems</li> </ol>	
Units	Content	No. of hours
I	Introductory concepts: Definition and scope of Statistics; Concept of population and sample.  Types of data: Quantitative; Qualitative; Attributes; Variates.  Tabulation of data: Class intervals; Frequency tables.  Presentation of data: Diagrams and graphs: Bar diagrams and their types; Pie charts; Frequency polygon; Histogram; Ogives.  Consistency and independence of data with special reference to attributes.  Scales of measurement: Nominal, Ordinal, Interval, Ratio.  Measures of Central Tendency: Mathematical and Positional – Mean, Median, Mode, Quartiles, Percentiles.  Measures of Dispersion: Range, Quartile deviation, Standard deviation, Coefficient of variation.	15
II	Bivariate data: Definition; Scatter diagram.  Correlation and Regression: Simple, Partial and Multiple Correlation (3 variables only); Rank correlation; Simple linear regression.	15
III	Probability: Introduction; Random experiments; Sample space; Events and algebra of events; Definitions of Probability — Classical, Statistical, and Axiomatic; Conditional Probability; Addition and Multiplication theorem of probability; Independent events; Theorem of Total probability; Bayes' theorem and its applications.	15

IV	Statistical Quality Control: Introduction; Causes of variation in quality; Objective, advantages, and techniques of SQC.  Attribute data: P chart, U chart, C chart.  Numerical data: X bar chart, R bar chart, S bar chart.  Sampling techniques: Various methods of data collection;  Census survey and sample survey.  Sampling Methods: Simple random sampling; Systematic	15
	sampling; Stratified sampling; Clustered sampling.  Non – probability Sampling Methods: Convenience sampling; Consecutive sampling; Quota sampling; Purposive or Judgmental sampling; Snowball sampling.	
Pedagogy:	Lectures/ Case Analysis/ Assignments/ Classroom Interaction/ Qu	uiz
References/ Reading:	<ol> <li>Bruce, P., Bruce, A., &amp; Gedeck, P. (2020). Practical statistics scientists: 50+ essential concepts using R and Python. O'Reilly</li> <li>Goon, A. M., Gupta, M. Cengage Learning.</li> </ol>	Devices n Guide, ssional. ummies.
Course Outcomes:	On completion of the course, students will be able to: CO 1. To create and format documents, create and format tables a merge CO 2. Understand the use and various functions of spreadsheets CO 3. Apply the knowledge of tools to create effective presentate CO 4. Understand PC assembling and troubleshooting	

#### **Skill Enhancement Courses**

Name of the Programme : Master of Science (Integrated) in Data Science

Course Code : IDS-142

Title of the Course : Programming in Python

Number of Credits : 3(1T+2P) Effective from AY : 2024-25

Effective from A1	. 2024-23	
Pre-requisites for the Course:	NIL	
Course Objectives:	<ol> <li>To understand critical programming language concepts</li> <li>To make use of python loop functions and debugging tools</li> <li>To write program using class and objects</li> <li>To configure and use various libraries &amp; packages with pytho</li> </ol>	n
Units	Content	No. of hours
	<ul> <li>The Python programming language</li> <li>Python language; variables, constants &amp; operators; data types, objects &amp; in-built library calls</li> <li>Selection and Iterative Constructs: Writing conditions, IF-ELSE constructs Conditional operators, SWITCH, WHILE and FOR loops, Use of BREAK and CONTINUE statements. Nested Loops</li> <li>Advance Data types: Lists, Tuples, Set, Dictionaries, Strings, Unicode, formatting strings, docString. Searching and sorting algorithms without using library functions.</li> <li>Modular Programming: Importance of User Defined Functions, Hierarchy charts, fan-in/out, cohesion and coupling and loosely coupled modules. Fan-in – Fan-out concepts.</li> <li>User Defined Functions: Local and Global Variables, Scoping Rules, Parameters &amp; arguments. Function with variable arguments. Modules, packages, scope. Recursion &amp; Recursive Functions. Recursive v/s Iterative Functions.</li> <li>Custom Data Types and File Management: Object of a Class and basic concept of classes &amp; OOP, Files, Exceptions in file handling.</li> <li>Introduction to Packages: Python packages for plotting, mathematical computation &amp; linear regression.</li> </ul>	15T

II	<ul> <li>Practical Work (Basic Programming in Python)</li> <li>Introduction to UNIX environment- Introduction to Fedora/Ubuntu, Basic directory and file handling commands, Editor (vi editor), man pages, installation of Python and Jupyter notebook.</li> <li>Assignments to practice decision control, branch and loop control structure</li> <li>Assignment to practice List, Set, Tuple, Dictionary &amp; Strings</li> <li>Assignments to practice functions &amp; Recursion</li> <li>Assignments to practice user-defined data types &amp; file handling</li> <li>Assignments to work with reading and writing data to file with exception handling</li> </ul>	30P
III	<ul> <li>Practical Work (Packages in Python)</li> <li>Assignment to create custom datatype using classes and objects</li> <li>Assignments to use package(s) related to loading, manipulating data using pandas</li> <li>Assignment to use Linear regression</li> <li>Assignments to practice with various charts / graphs/3-D charts/boxplot</li> </ul>	30P
Pedagogy:	Lectures, Tutorials. Assignments, Seminars, Presentations combination of some of these can also be used. ICT mode shapreferred. Sessions should be interactive in nature to enable per learning.	ould be
References/ Reading:	<ol> <li>Guttag, J. V. (2016). Introduction to computation and programming using Python: With application to understanding data. MIT press.</li> <li>Kumar, N., &amp; Taneja, S. (2018). Python Programming: A Modular Approach.</li> <li>Sprankle, M., &amp; Hubbard, J. (2012). Problem solving and programming concepts. Prentice Hall Press.</li> <li>https://scikit-learn.org/stable/index.html [Accessed: Jan 20, 2024]</li> </ol>	
Course Outcomes:	On completion of the course, students will be able to: CO 1. Analyze a given problem and develop a Python program to CO 2. Identify test cases for a given problem. CO 3. Understand, test, trace programs written in Python langua CO 4. Working with python Standard Libraries	

#### **SEMESTER III**

## **Major Courses**

Name of the Programme : Master of Science (Integrated) in Data Science

Course Code : IDS-200

Title of the Course : Introduction to Data Science

Number of Credits : 4

Pre-requisites for the Course:	NIL	
Course Objectives:	To gain a thorough understanding of the data science fundamentals.	
Units	Content	No. of hours
1	Introduction - meaning, definition, significance, Role of data scientist, Data Science Process Life Cycle, Challenges in data science process, applications, the significance of domain knowledge in data science, the significance of mathematics in data science	15
II	Data - information vs data, structured and unstructured data, sources of data, data collection methods.  Data preprocessing - cleaning, integration, transformation, reduction, discretization, feature selection and extraction, scaling, normalizing, dimensionality reduction.	15
Ш	Data analysis - descriptive analysis, diagnostic analysis, predictive analysis, exploratory analysis.  Model building basics - linear regression, classification, trend analysis.  Model Evaluation - accuracy, precision, recall, F1-score.	15
IV	Ethics, bias, and privacy in data science. Information security. Applying data science to real-world problems. Case studies from industry - Business, Healthcare, Finance, Education, Tourism, etc.	15
Pedagogy:	Lectures, Tutorials. Assignments, Seminars, Presentations combination of some of these can also be used. ICT mode sho preferred. Sessions should be interactive in nature to enable peelearning.	

References/ Reading:	<ol> <li>Kelleher, J. D., &amp; Tierney, B. (2018). Data science. MIT press.</li> <li>Pierson, L. (2021). Data science for dummies. John Wiley &amp; Sons.</li> <li>Blum, A., Hopcroft, J., &amp; Kannan, R. (2020). Foundations of data science. Cambridge University Press.</li> </ol>
Course Outcomes:	On completion of the course, students will be able to understand: CO 1. The role of data science in other domains. CO 2. The data science process/pipeline for a given problem. CO 3. Data analytics techniques to collect and process data. CO 4. The applications of data science in various sectors.

Name of the Programme : Master of Science (Integrated) in Data Science

Course Code : IDS-201

Title of the Course : Linear Algebra

Number of Credits : 4

Pre-requisites for the Course:	NIL	
Course Objectives:	<ol> <li>Understand fundamental concepts of linear algebra, including matrices, determinants, vector spaces, and transformations.</li> <li>Develop problem-solving skills using methods like Gaussian elimination, eigenvalues, and singular value decomposition.</li> <li>Apply linear algebra to real-world problems in computing, data science, and engineering.</li> </ol>	
Units	Content	No. of hours
1	Linear Systems:  Systems of linear equations, elementary row operations, rank of a matrix, Gaussian elimination, elementary matrices, inverse of a matrix.  Determinants:  Determinant as area and volume, determinant using permutations, properties of determinants, Singular and Nonsingular matrices, Rank of a matrix	15
II	Vector Spaces: Vector Spaces over fields, subspaces, linear independence, bases, dimension.  Linear Transformations: Linear transformations, algebra of linear transformations, Rank Nullity Theorem and applications, isomorphism, change of bases, transpose of a linear transformation.	15
III	Inner Product Spaces: Inner products, Gram-Schmidt orthogonalization, orthogonal projections and best approximation, linear functionals and adjoint operator, bilinear maps, quadratic forms, symmetric, hermitian, unitary and normal operators.	15

IV	Eigenvalues and Eigenvectors:  Eigenvalues and eigenvectors, characteristic polynomial, minimal polynomials, Cayley-Hamilton Theorem, triangulation and diagonalization, Finite dimensional spectral theorem for normal operators, Singular Value Decomposition, Jordan canonical form.
Pedagogy:	Lectures/ Case Analysis/ Assignments/ Classroom Interaction/Quiz
References/ Reading:	<ol> <li>Lang, S. (1987). Linear algebra. Springer.</li> <li>Hoffman, K., &amp; Kunze, R. (1978). Linear algebra (2nd ed.). Prentice Hall India Learning Private Limited.</li> <li>Axler, S. (1997). Linear algebra done right (2nd ed.). Springer.</li> </ol>
Course Outcomes:	<ul> <li>On completion of the course, students will be able to:</li> <li>CO 1. Learn to use Gaussian elimination and matrix operations to solve systems of equations and find matrix properties.</li> <li>CO 2. Learn about vector spaces, bases, dimension, and linear transformations.</li> <li>CO 3. Compute determinants and use them to analyze matrices.</li> <li>CO 4. Use inner products, orthogonality, and projections in vector spaces.</li> <li>CO 5. Find eigenvalues, eigen vectors, and apply matrix factorizations like SVD and Jordan form.</li> </ul>

#### **Minor Courses**

Name of the Programme : Master of Science (Integrated) in Data Science

Course Code : IDS-211

Title of the Course : Deductive and Inferential Mathematics

Number of Credits : 4

	. 2025-20	1
Pre-requisites for the Course:	NIL	
Course Objectives:	<ol> <li>To use logical reasoning to solve problems and prove statemer</li> <li>To earn key mathematical concepts like logical equivalent normal forms.</li> <li>To apply probability and statistics to analyze data and predictions.</li> </ol>	
Units	Content	No. of hours
I	Mathematical Logic& Proofs  An open sentence, a closed sentence, Definition of proposition or a Statement.Strong emphasis on the Distinction between Inclusive OR and Exclusive OR. Truth tables.Compound Proposition. Algorithms, Truth tables and Tautologies Equivalent statements (≡). Examples and important logical results. De Morgan Laws for negation.Conditional and Biconditionals, Arguments and Proofs	15
II	Well-formed-formulae Equivalence of formulae. Various laws governing the well-formed formulae. Duality law. Normal Form. Disjunctive normal form, conjunctive normal form, Principal disjunctive normal form, Principal conjunctive normal form. Propositional Calculus. Predicate Calculus. Predicate Formula. Equivalence of Predicate Formulae. Inference Theory	15
III	Introduction to Inference Theory Introduction to Probability Theory using Kolmogorov Technique: Definition of an experiment. Outcomes of an experiment. Outcomes which are not decomposable. Sample space as the set of all non-decomposable outcomes of an experiment. Event as any subset of the sample space of an experiment under consideration. Idea of variations. Standard deviation as the root mean square deviation with respect to the mean. Mathematical Expectation and Expected Values. Random Variables: Idea of Distribution of a Function. Some	15

	standard Distributions such as Binomial., Normal, Poisson and Exponential. Their standard properties with the stress on Normal Distribution. Use of Normal Distribution Table to solve problems.	
IV	Logic Programming Propositional Logic vs. Predicate Logic; Fundamentals of Logical Knowledge Representation (Facts, Rules, and Queries); Unification in logic programming (predicates, variables, constants, logical operators); Recursive rule definitions; solving logical inference using resolution; solving constraint satisfaction problems	15
Pedagogy:	Lectures/ Practice Problems/ Assignments/ Classroom Interaction	n/ Quiz
References/ Reading:	<ol> <li>Tarski, A. (1994). Introduction to Logic and to the Methodology of the Deductive Sciences (Vol. 24). Oxford university press.</li> <li>Sahu, P. K., Pal, S. R., &amp; Das, A. K. (2015). Estimation and inferential statistics (pp. 1-317). New Delhi: Springer.</li> <li>Ben-Ari, M. (2012). Mathematical logic for computer science. Springer Science &amp; Business Media.</li> <li>Tremblay, J. P., &amp; Manohar, R. (2017). Discrete mathematical structures with applications to computer science. McGraw-Hill, Inc.</li> </ol>	
Course Outcomes:	<ul> <li>On completion of the course, students will be able to:</li> <li>CO 1. Explore, conjecture, and reason logically to model and arr solution to a given problem.</li> <li>CO 2. Apply different mathematical methods to solve prefectively.</li> <li>CO 3. Learn decision-making in the presence of uncertainty and we to quantify the uncertainty in estimation /the decision</li> </ul>	roblems

Name of the Programme : Master of Science (Integrated) in Data Science

Course Code : IDS-212

Title of the Course : Discrete Mathematics

Number of Credits : 4 Effective from AY : 2025-26

Pre-requisites for the Course:	NIL	
Course Objectives:	<ol> <li>To understand fundamental concepts of, sets, relations, and functions for mathematical reasoning.</li> <li>To develop problem-solving skills using combinatorics, graph theory and recursion.</li> <li>To apply discrete mathematics to algorithms, data structures, and computational problems in computer science.</li> </ol>	
Units	Content	No. of hours
1	Mathematical Logic: Introduction, Statements and Notation, Connectives, Wellformed formulas, Tautology, Duality law, Equivalence, Implication, Normal Forms, Functionally complete set of connectives, Inference Theory of Statement Calculus, Predicate Calculus, Inference theory of Predicate Calculus.  Set Theory: Basic Concepts of Set Theory, Relations and Ordering, The Principle of Inclusion-Exclusion, Pigeonhole principle and its application, Functions, Composition of functions, Inverse Functions, Recursive Functions, Lattices and its properties.	15
II	Algebraic Structures: Examples and General Properties, Semi-groups and Monoids, Groups, Sub-groups, Homomorphism, Isomorphism, Cosets, Lagrange's Theorem, Group Actions, Cyclic Groups, Abelian Groups, Permutation Groups, Symmetry Groups, Properties of groups and their applications, Normal Subgroups, Quotient Groups, Applications in cryptography and coding theory.	15

III	Elementary Combinatorics and Recurrence Relations Basics of Counting, Combinations and Permutations, Enumeration of Combinations and Permutations, Enumerating Combinations and Permutations with Repetitions, Enumerating Permutations with Constrained Repetitions, Binomial Coefficients, The Binomial and Multinomial Theorems, Advanced Counting Techniques, Pigeonhole Principle, Inclusion-Exclusion Principle, Stirling Numbers, Recurrence Relations, Generating Functions of Sequences, Calculating Coefficients of Generating Functions, Solving Recurrence Relations by Substitution and Generating Functions, The Method of Characteristic Roots, Solutions of Inhomogeneous Recurrence Relations.	15
IV	Graph Theory Basic Concepts of Graphs, Types of Graphs, Isomorphism and Sub-graphs, Graph Representations (Adjacency Matrix, Adjacency List), Trees and their Properties, Spanning Trees, Directed Trees, Binary Trees, Planar Graphs, Euler's Formula, Multigraphs and Euler Circuits, Hamiltonian Graphs, Chromatic Numbers, The Four Color Problem, Graph Traversals (DFS, BFS), Network Flow, Bipartite Graphs, Graph Coloring, Applications of Graphs in Networks and Scheduling.	15
Pedagogy:	Lectures/Practice Problems/Assignments/ Classroom Interaction/	Quiz
References/ Reading:	<ol> <li>Tremblay, J. P., &amp; Manohar, R. (2017). Discrete mathematical structures with applications to computer science. McGraw-Hill, Inc.</li> <li>Kolman, B., Busby, R. C., &amp; Ross, S. C. (2011). Discrete mathematical structures. PHI Learning.</li> <li>Malik, D. S., &amp; Sen, M. K. (2004). Discrete mathematical structures: Theory &amp; applications. Thomson India Edition.</li> </ol>	
Course Outcomes:	<ul> <li>On completion of the course, students will be able to:</li> <li>CO 1. Identify and work with finite, infinite, and uncountable sets, apply mathematical induction, and use inclusion-exclusion principles.</li> <li>CO 2. Solve problems involving permutations, combinations, discrete, and conditional probability.</li> <li>CO 3. Apply properties of binary relations and functions, including in databases and job scheduling.</li> <li>CO 4. Work with graphs, Eulerian/Hamiltonian paths, spanning trees, and planar graphs.</li> <li>CO 5. Algebraic Structures and Boolean Algebra: Understand group theory, rings, fields, and manipulate Boolean functions and propositional calculus.</li> </ul>	

## **Multi-disciplinary Courses**

Name of the Programme : Master of Science (Integrated) in Data Science

Course Code : IDS-231

Title of the Course : Website Design

Number of Credits : 3

Effective from AY	: 2025-26	
Pre-requisites for the Course:	NIL	
Course Objectives:	<ol> <li>Understand website basics, design principles, and no-code tools.</li> <li>Learn how to structure content, use media, and improve usability</li> <li>Optimize, maintain, and update websites for better user experie and visibility</li> </ol>	
Units	Content	No. of hours
I	<ol> <li>Introduction to Website Design</li> <li>Website concept; types of websites; components of website and webpage; UX &amp; UI; accessibility and mobile responsiveness</li> <li>Principles of good design; wireframing and prototyping</li> <li>No-code website builders; choosing/customizing template; adding pages</li> </ol>	15
II	<ol> <li>Building and Structuring a Website</li> <li>Structuring a website with navigation menu, content writing and placement, organize sections</li> <li>Adding basic interactive features like embedded media, contact forms, social media integrations</li> <li>Publish/manage website by understanding domain/hosting, basics of SEO, and launching personal website</li> </ol>	15
III	<ol> <li>Enhancing and Maintaining Websites</li> <li>Website optimization by improving website loading speed, and image/media optimization without quality loss</li> <li>Security basics: Backups, SSL certificates, and privacy policies</li> <li>Advanced Features like creating forms, pop-ups, and live chat, embedding Google Analytics for visitor insights, simple automation like email signup, appointment booking</li> <li>Website maintenance by regular website updates, monitoring visitor engagement, digital marketing</li> </ol>	15
Pedagogy:	Lectures, Tutorials. Assignments, Seminars, Presentations combination of some of these can also be used. ICT mode sho preferred. Sessions should be interactive in nature to enable peelearning.	

References/ Reading:	<ol> <li>Krug, S. (2014). Don't make me think, revisited: A common sense approach to web usability (3rd ed.). New Riders.</li> <li>McFarland, D. S. (2021). CSS: The missing manual (5th ed.). O'Reilly Media.</li> <li>Robbins, J. N. (2018). Learning web design: A beginner's guide to HTML, CSS, JavaScript, and web graphics (5th ed.). O'Reilly Media.</li> <li>Van Duyne, D. K., Landay, J. A., &amp; Hong, J. I. (2006). The design of sites: Patterns for creating winning websites (2nd ed.). Pearson Education.</li> <li>Zeldman, J., &amp; Marcotte, E. (2010). Designing with web standards (3rd ed.). New Riders.</li> </ol>
Course Outcomes:	On completion of the course, students will be able to: CO 1. Design User-Friendly Websites by applying basic design and UX principles CO 2. Build and Customize Websites by use of no-code tools CO 3. Optimize Website Performance by improving speed, SEO, and accessibility CO 4. Publish and Manage Websites by connecting domains and maintaining updates.

## **Skill Enhancement Courses**

Name of the Programme : Master of Science (Integrated) in Data Science

Course Code : IDS-241

Title of the Course : Basic Toolkit for Research

Number of Credits : 3(1T+2P) Effective from AY : 2025-26

Effective from A	: 2025-20	1
Pre-requisites for the Course:	NIL	
Course Objectives:	<ol> <li>To have basic knowledge of various software tools and platforms for data handling.</li> <li>To gain hands-on experience with various software tools for research.</li> </ol>	
Units	Content	No. of hours (75) (15T+60P)
	Markdown Document structure; basic text formatting; paragraphs; headings; lists; links and images; code blocks; escape characters; HTML elements; converting markdown to HTML web pages.  Source Version Control Version Control; introduction to SVN and Git; Git repositories; Git cloning, forks/branches; Git stash; Git pull requests; Git merge conflicts; Git pages.  Scientific Documents TEX; LaTEX; documents, lists, enumeration, figures/tables; mathematics; symbols; referencing	15
II	Practical Work  Markdown - Setting up portfolio, creating code chunk, formatting, adding links, images, tables, tables, mathematical formulae.  Git basics - Setting up a repository, managing branches, remote repositories, analysing git history, push code to GitHub, cherry-pick a range of commits, using git to track changes	30P

III	Practical Work Latex - Document structure, lists and enumeration, inserting figures, inserting tables, including mathematical symbols and equations, cross-referencing, bibliography and citation, switching templates.  IDEs (RStudio/Spyder) - Setting up of IDE, features, exploring the interface, installing and loading packages, using Markdown for documentation.  Python Notebooks/ Google Colab: Installation, cell types Code, Markdown, Raw NBConvert, code and syntax highlighting, adding forms in colab, exporting to different formats, extensions, publishing and sharing the notebook using free GPU.	30P
Pedagogy:	Lectures, Practical sessions, Assignments, Seminars, Presentations, Miniprojects or a combination of some of these can also be used. ICT mode should be preferred. Sessions should be interactive in nature to enable peer group learning.	
References/ Reading:	<ol> <li>Cone, M. (2020). Markdown guide. Independently Published.</li> <li>Scott, C., &amp; Ben, S. (2016). Pro Git.</li> <li>Oetiker, T., Partl, H., Hyna, I., &amp; Schlegl, E. (2014). The not so short introduction to LaTeX. Typeset LATEX 2ε.</li> <li>Wickham, H., Çetinkaya-Rundel, M., &amp; Grolemund, G. (2023). R for data science. " O'Reilly Media, Inc.".</li> </ol>	
Course Outcomes:	On completion of the course, students will be able to: CO 1. Use Markdown for effective documentation. CO 2. Use LaTex for research documentation CO 3. Collaborate on data analysis projects using version control tool. CO 4. Make use of IDEs and python notebooks for programming and research.	

## **SEMESTER IV**

## **Major Courses**

Name of the Programme : Master of Science (Integrated) in Data Science

Course Code : IDS-202

Title of the Course : Data Modeling and Visualization

Number of Credits : 4 (3T+1P) Effective from AY : 2025-26

Pre-requisites for the Course:	NIL	
Course Objectives:	<ol> <li>To introduce the fundamental concepts of and principles of data modeling.</li> <li>To understand the role of data visualization in data analysis.</li> </ol>	
Units	Content	No. of hours (75) (45T + 30P)
I	Data modeling - Meaning, significance, lifecycle, types of models. Relational model - Overview, keys in relational database, data anomalies, normalization and denormalization. ER modeling - ER diagrams, Cardinality constraints, crow's foot notation, recursive relationships, cross entity dependencies.	15
II	Dimensional modeling - Star Schema vs. Snowflake Schema, fact tables, dimension tables, slow changing dimensions, data cubes and multidimensional modeling.  NoSQL Data Modeling - NoSQL databases (Key-value stores, Document stores, Column-family stores, Graph databases), modeling for NoSQL vs. Relational databases, Schema design for MongoDB and Cassandra, scalability and consistency issues.	15
III	Visualization - Meaning, components, significance of visualization in data analysis, design and cognitive principles, ethics and best practices.  Data visualization types - right graph for right data.  Visualization tools - Overview of popular data visualization tools (Tableau, Power BI etc.), basics of report and dashboard creation, web-based interactive data visualization platforms.	15

IV	Practical Work  Lab assignments/exercises based on a data modeling-visualisation platform like PowerBI/Tableau.  Overview - Installation and set up, connecting to data.  Modeling - Building a data model for a given business scenario.  Charts - bar chart, line graph, pie chart, bubble chart, heat map.  Calculations - sum, average, aggregation, custom calculations.  Structuring data - sort, filter, pivot, custom filters, tooltips, color formatting.  Dashboards - storytelling, design for different displays, interactive dashboards for a business scenario, dashboard sharing.	<b>30</b> P
Pedagogy :	Lectures, Practical sessions, Assignments, Seminars, Presentations, Miniprojects or a combination of some of these can also be used. ICT mode should be preferred. Sessions should be interactive in nature to enable peer group learning.	
References/ Reading:	<ol> <li>Simsion, G., &amp; Witt, G. (2004). Data modeling essentials. Elsevier.</li> <li>Healy, K. (2018). Data visualization: a practical introduction. Princeton University Press.</li> <li>Ware, C. (2019). Information visualization: perception for design. Morgan Kaufmann.</li> <li>Ferrari, A., &amp; Russo, M. (2016). Introducing Microsoft Power BI. Microsoft Press.</li> </ol>	
Course Outcomes :	On completion of the course, students will be able to: CO 1. Understand data modeling principles and the corresponding tools. CO 2. Build data models for real world business scenarios. CO 3. Understand the principles of effective data visualization. CO 4. Choose appropriate visualizations for different types of the course	n.

Name of the Programme : Master of Science (Integrated) in Data Science

Course Code : IDS-203

Title of the Course : Linear Programming and Optimization

Number of Credits : 4 Effective from AY : 2025-26

Pre-requisites for the Course:	A basic understanding of linear algebra and calculus techniques for optimization, including matrix operations, optimality conditions.  Familiarity with at least one software tool for numerical computations, such as Excel, R, MATLAB, Python, or an equivalent platform.	
Course Objectives:	<ol> <li>To understand and apply problem-solving techniques both theoretically and graphically.</li> <li>To develop the ability to analyze and interpret the results of mathematical models in real-world contexts.</li> <li>To enhance problem-solving skills by applying optimization techniques to diverse scenarios.</li> </ol>	
Units	Content	No. of hours
I	Linear Programming Introduction —Properties of Linear Programming-Basic assumptions-Mathematical formulation of Linear Programming. Limitations or constraints-Methods for the solution of LP	15
II	Problem-Graphical analysis of LP-Graphical LP Maximization problem-Graphical LP Minimization problem.  Simplex method and its variant: Simplex method, Artificial variable techniques- Two Phase Method; M-Charnes Method, Big M Method. Special cases in LPP.	15
III	Duality: Definition of the dual problem, Primal-dual relationships, Economic Interpretation of Duality, Dual simplex Method.	15
IV	Sensitivity analysis: Changes in cost and resource vector.  Transportation and Assignment Models Introduction:Transportation problem - Balanced - Unbalanced - Methods of basic feasible solution Optimal solution-MODI method.  Assignment problem-Hungarian Method.	15
Pedagogy:	Lectures/ Practice Problems/ Assignments/ Presentations	

References/ Reading:	<ol> <li>Taha, H. A. (2008). Operations research: An introduction (8th ed.). Prentice Hall.</li> <li>Hillier, F. S., &amp; Lieberman, G. J. (2010). T., &amp; Solberg, J. J. (2005). Operations research: Principles and practice. John Wiley &amp; Sons.</li> </ol>
Course Outcomes:	<ul> <li>On completion of the course, students will be able to:</li> <li>CO 1. Understand the fundamental concepts and principles of Linear Programming Problems (LPP).</li> <li>CO 2. Apply various LPP techniques to solve real-world problems.</li> <li>CO 3. Differentiate between different methods for solving LPPs based on the type of constraints and the number of variables.</li> <li>CO 4. Evaluate the importance of the solution in terms of uniqueness, bounds, and optimality.</li> <li>CO 5. Formulate mathematical models for management and technical problems using LPP concepts.</li> <li>CO 6. Develop an interest in solving transportation and assignment problems while understanding their physical significance.</li> </ul>

Name of the Programme : Master of Science (Integrated) in Data Science

Course Code : IDS-204

Title of the Course : Fundamentals of Computing Systems Design

Number of Credits : 4
Effective from AY : 2025-26

Pre-requisites for the Course:	Knowledge of Programming	
Course Objectives:	<ol> <li>To understand the key principles of computing system design, including application-level and system-level considerations.</li> <li>To analyze and design modular, scalable, and efficient computing systems.</li> <li>To explore performance estimation, fault tolerance, and security considerations in system design.</li> <li>To gain hands-on experience through case studies and a team-based design project</li> </ol>	
Units	Content	No. of hours (60)
I	<ol> <li>Foundations of Computing System Design</li> <li>Overview of computing systems; mobile computing; System design approach and key challenges</li> <li>Applications; operating systems, and their interactions; Storage systems and file management; Computer architecture and hardware execution models</li> </ol>	15
II	<ol> <li>Modularity, Workloads &amp; Performance Estimation</li> <li>Modularity with clients and services; modularity with virtualization</li> <li>Understanding different types of computing workloads</li> <li>Performance estimation and optimization techniques</li> </ol>	15
III	<ol> <li>Networks, Fault Tolerance &amp; Security</li> <li>Networking fundamentals in system design; Networked applications and distributed systems</li> <li>Designing fault-tolerant and resilient systems; Redundant system design principles</li> <li>Enforcing information security in computing systems; Best practices for secure system architecture</li> </ol>	15

IV	<ol> <li>Case Studies &amp; Project</li> <li>Analysis of real-world systems such as YouTube, Twitter, Instagram, etc.</li> <li>Design a small-scale computing system to address specific problems, so that the system is scalable, maintainable, and fault tolerant</li> </ol>	15
Pedagogy:	Lectures, Tutorials. Assignments, Seminars, Presentations combination of some of these can also be used. ICT mode sho preferred. Sessions should be interactive in nature to enable peel learning.	
References/ Reading:	<ol> <li>Saltzer, J., &amp; Kaashoek, M. F. (2009). Principles of computer system design (1st ed.). Elsevier.</li> <li>Jain, R. (1991). The art of computer systems performance analysis. John Wiley &amp; Sons.</li> <li>Anderson, R. (2008). Security engineering: A guide to building dependable distributed systems (2nd ed.). John Wiley &amp; Sons.</li> <li>Perlman, R. (1999). Interconnections: Bridges, routers, switches, and internetworking protocols (2nd ed.). Addison-Wesley</li> </ol>	
Course Outcomes :	On completion of the course, students will be able to: CO 1. Analyze computing system components and their interaction CO 2. Evaluate system architectures for scalability and efficiency. CO 3. Apply fault tolerance, security, and high availability principle CO 4. Create a small-scale computing system in a team project. CO 5. Justify system design decisions through real-world case students.	es.

Title of the Course : LINUX Fundamentals

Number of Credits : 2 Effective from AY : 2025-26

Pre-requisites for the Course:	NIL	
Course Objectives:	To introduce students to the Linux operating system environments provide knowledge of basic Linux commands and shell scripting	ent and
Units	Content	No. of hours (60)
1	<ol> <li>Introduction - Linux Installation</li> <li>Directory handling - cd, mkdir, rmdir, mv, pwd</li> <li>File manipulation - cat, cp, ls, mv, rm, chmod, chown, find, cat, more, head, tail, cmp, wc, touch, pr</li> <li>General purpose - date, history, man, who, whoami, uptime, finger, cal, uname, tree, bc, tar, zip</li> <li>String manipulation - grep, egrep, cut, paste, tr, sort, rev, awk, sed</li> <li>Process utilities - ps, pid, ppid, tty, time, kill, exit</li> <li>Network utilities - ping, ifconfig, netstat, hostname, traceroute, telnet, ssh, mount, network configuration</li> </ol>	30P
II	<ol> <li>Shell Programming basics: Interactive shell script, positional parameters, operators, decision constructs, iterative constructs, Meta characters.</li> <li>Shell programming for file manipulation - display contents, renaming based on extension, concatenation, find and display hidden files, counting the number of files, red-only write only files, file conversion to HTML, automate backup, deletion based on conditions, archive and compress log files.</li> <li>Shell programming for user info - check if user exists, is logged in, password generation with criteria, generate reports of login activity, frequently used commands by the users.</li> </ol>	30P
Pedagogy:	Practical, tutorials, assignments, mini-projects, self-study	
References/ Reading:	<ol> <li>Das, S. (2006). UNIX, Concepts and Applications. Tata McGraw-Hill.</li> <li>Glass, G., &amp; Ables, K. (2003). UNIX for Programmers and Users. Pearson Education India.</li> <li>Raymond, E. S. (2003). The art of Unix programming. Addison-Wesley Professional.</li> </ol>	

	On completion of the course, students will be able to :	
Course	CO 1. Gain a deeper understanding of shell programming and its	
Outcomes:	implications.	
	CO 2. Implement efficient shell scripts on LINUX OS	

## **Minor VET Courses**

Name of the Programme : Master of Science (Integrated) in Data Science

Course Code : IDS-221

Title of the Course : Rapid App Development

Number of Credits : 4 (3T+1P) Effective from AY : 2025-26

Pre-requisites for the Course:	NIL	
Course Objectives:	<ol> <li>To introduce learners to rapid application development using no-code and low-code platforms for web, mobile, and IoT applications.</li> <li>To equip learners with the skills to design, build, and deploy functional applications without extensive coding knowledge.</li> <li>To enable learners to integrate external services, automate processes, and develop real-world projects using RAD tools.</li> </ol>	
Units	Content	No. of hours (75) (45T+30P)
I	<ol> <li>Introduction to Rapid Application Development (RAD)</li> <li>Understanding RAD; Benefits/Limitations of low-code/no-code approaches; Overview of Web/Mobile/IoT apps</li> <li>Understanding Low-Code vs No-Code Development and when to use which approach; exploring popular platforms for each (e.g., WordPress, MIT App Inventor, Pictoblox)</li> <li>UI/UX principles for rapid app development; Prototyping and wireframing tools</li> </ol>	15
II	<ol> <li>Web App Development with No-Code &amp; Low-Code Tools</li> <li>Static vs Dynamic websites; Database-driven web applications</li> <li>No-Code Web Development with a platform (like WordPress); setting up a website; themes, plugins, and customization; forms, databases and automation tools</li> <li>Low-Code Web App Development with a platform (like Bubble, OutSystems, and Adalo); build simple web applications with drag-and-drop interfaces; connect web apps to external APIs</li> </ol>	15

III	<ol> <li>Mobile &amp; IoT App Development with No-Code/Low-Code Tools</li> <li>No-Code Mobile App Development with a platform (like MIT App Inventor); build a basic mobile app (UI, logic, and testing); integrate mobile sensors and cloud services</li> <li>IoT Application Development with a platform (like Pictoblox) for IoT and smart applications; connect sensors and microcontrollers; simple automation</li> <li>Export/publish mobile apps; connecting mobile and web applications; IoT app deployment considerations</li> </ol>	15
IV	<ul> <li>Practical Work (Assignments)</li> <li>1. The assignments/exercises in the practicals will be based on Module-I/-II/-III and will reinforce concepts of RAD.</li> <li>2. It is recommended to use low/no-code tools like building block tools like WordPress, MIT App Inventor, Pictoblox, Bubble, OutSystems, Adalo, etc.</li> <li>Practical Work (Project)</li> <li>Projection selection and planning, by brainstorming ideas, defining scope and feature and choosing the right platforms/tools for implementation</li> <li>Develop apps, using no-/low-code platforms, implement UI/logic/external integrations, test/debug applications</li> <li>Deployment/publish the app, for user feedback and peer review</li> <li>The project is ideally done in a group</li> </ul>	<b>30</b> P
Pedagogy:	Lectures, Tutorials. Assignments, Seminars, Presentations or a combination of some of these can also be used. ICT mode should be preferred. Sessions should be interactive in nature to enable peer group learning.

Course Outcomes:	<ul> <li>On completion of the course, students will be able to:</li> <li>CO 1. Describe the principles and advantages of rapid application development using no-code and low-code tools.</li> <li>CO 2. Demonstrate the ability to create web applications using no-code/low-code platforms.</li> <li>CO 3. Develop functional mobile applications using platforms like MIT App Inventor.</li> <li>CO 4. Integrate APIs, automation tools, and external services into IoT/mobile applications.</li> <li>CO 5. Deploy and present a working app prototype based on a real-world use case.</li> </ul>
